

Standard Work

Learning Objectives

At the conclusion of this review, supervisors should be able to:

- Define standard work.
- Discuss the elements and methods of standard work.
- Be familiar with some documents for standard work.

What is Standard Work?

By Standard Work we mean tasks are laid out in such a manner that any assigned supervisor, lead or operator, with a proper workstation and proper tools will complete the work required in the same amount of time, with the same quality, without risk to health or safety.

Who Uses Standard Work?

- Pit Crews
- Athletic Teams
- Airline Pilots
- Surgeons

- Military
- Hotels
- Telemarketers
- Everyone!

We all develop standard work in our every day life:

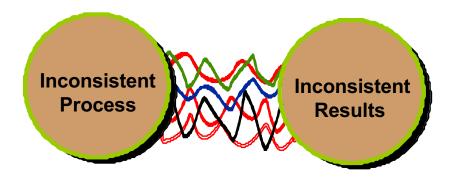

As Mark was walking down the dock to his fishing boat, his arm hit his phone, which was attached to his belt; the phone came off, hit the dock and fell into the water.

After that event Mark quickly developed his standard work: Before entering the gate to the boat docks he removes his phone from his belt and places the phone in his pocket.

Standard Work Paradigm

Old Paradigm

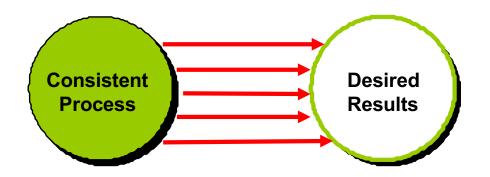

"I don't care how you get the job done, just do it."

Traditional Culture = People do whatever they can to get results

New Paradigm

Everyone does the job according to an agreed upon methodology

*CI Culture = People use a consistent process to get results

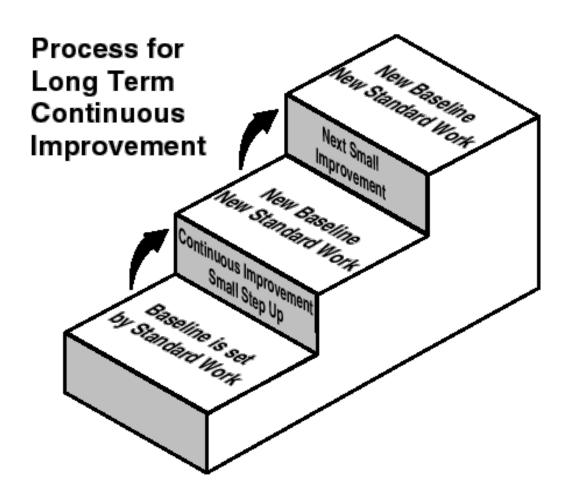

*Continuous Improvement

Why use Standard Work?

Standardized Work is the one <u>BEST</u> combination of people and machines needed to complete a task using the <u>minimum</u> amount of time, materials, equipment and space while providing consistent performance of quality.

- Supports the Value Stream Flow by reducing variation in how work is performed (worker consistency) and variation in Value Stream
 Performance (management consistency)
- Eliminates waste while increasing quality and decreasing costs
- Encourages employee involvement increasing safety and is <u>the</u> tool for training!
- Stabilizes working conditions, improving productivity by defining what is normal and provides a foundation for a continuous improvement culture

Foundation for Continuous Improvement

Standard Work

- Standard Work is necessary for flow and focuses on consistent value to the customer
- Standard Work is not easy to create or sustain "50% of CI work is creating standard work"
- Standard Work is developed through education and leadership requiring a 'Long Term' vision

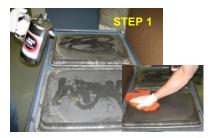

When work is highly defined and standardized, tracking the processes becomes easy.

Standardization of work is *clearly mapping* procedures

Three Levels of Standard Work

 Process - Standard work at the process level provides all the information required to complete the process.

- Management
- Abnormal

Spray the plate with Naphtha and scrub the

Plate with a shop rag (use separate rags for each plate).

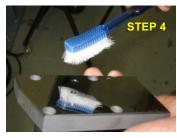

Charge the plate with diamond compound (blue compound is 15 micron); wet the plate with Naphtha (use 15 micron lapping plate only when large scratches are present).

Spread the paste then lap the tooling in a figure 8 motion (Do not hold the tooling by the guide rods).

Desired 15 micron finish.

Clean the tooling with methanol and a tooth brush to remove all debris and compound.

Dry tooling with compressed air

Charge the plate with diamond compound (orange compound is 6 micron); wet the plate with Naphtha; Spread the past then lap the tooling in a Figure 8 motion (Do not hold tooling by the guide rods).

Desired 6 micron finish.

Place 11x17 paper on 6 micron lapping plate. Wet with Naphtha. Lap the tooling in a figure 8 motion.

Desired final finish.

Major scratches require 15 micron lapping; follow steps 1-7.

Minor scratches do not require 15 micron lapping; follow steps 1 & 6-7.

FRIT VS: LAPPING DATE:

APPROVED:

Step by Step <u>visual</u> instructions that define the assembly process and provide the most efficient sequence build.

Sockets are color coded to make sure the correct tool is used according to the work instructions.

Visual instructions for kanban cards; purchasing agent picks up the cards each day to place the order

Visual Std Wrk instructions; explaining what to do with the kanban card when you reach the divider

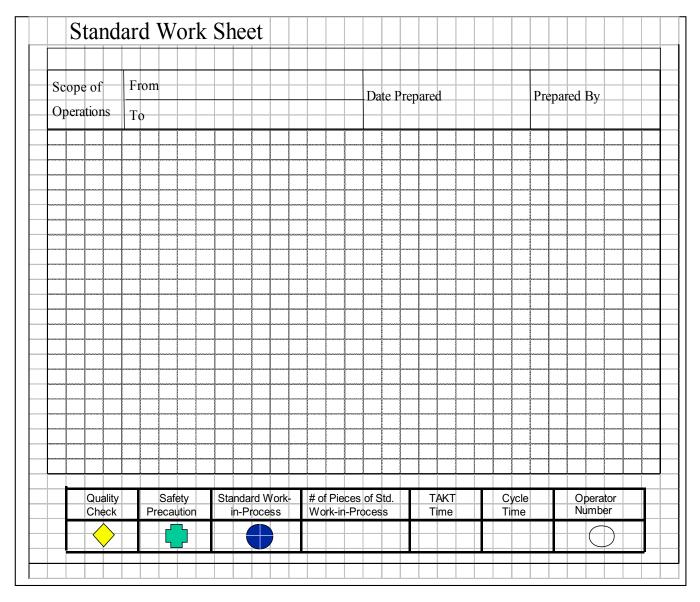

Kanban Card

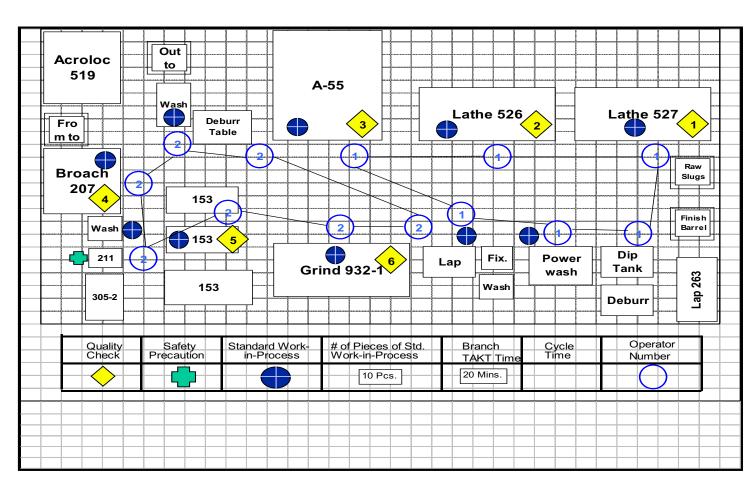

Cycle Stock Buffer Stock Safety Stock

Standardized Work Sheet

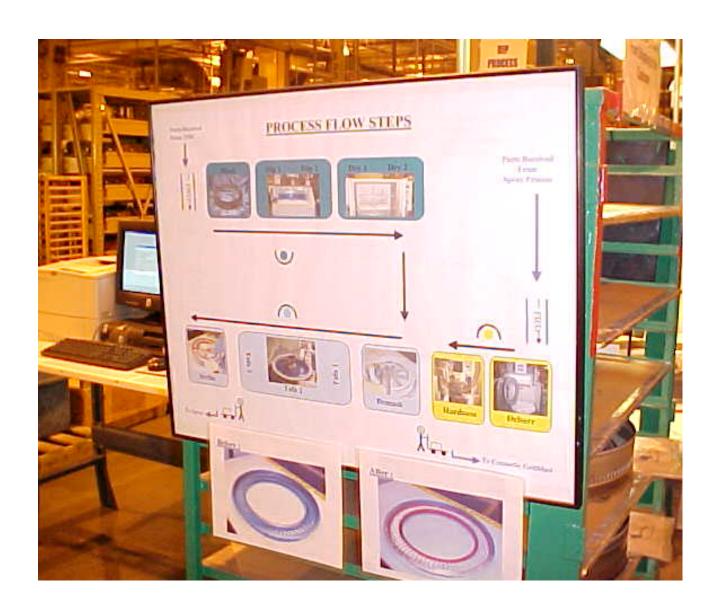

Standardized Work Sheet

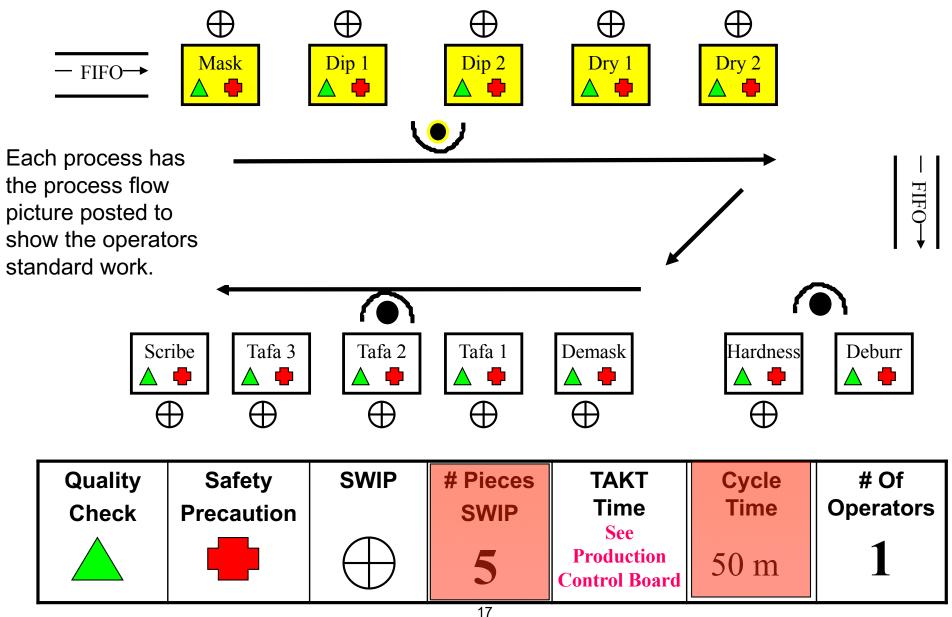

This standard work sheet provides the "dance steps" (sequence of processes) of the production process.

Standardized Work

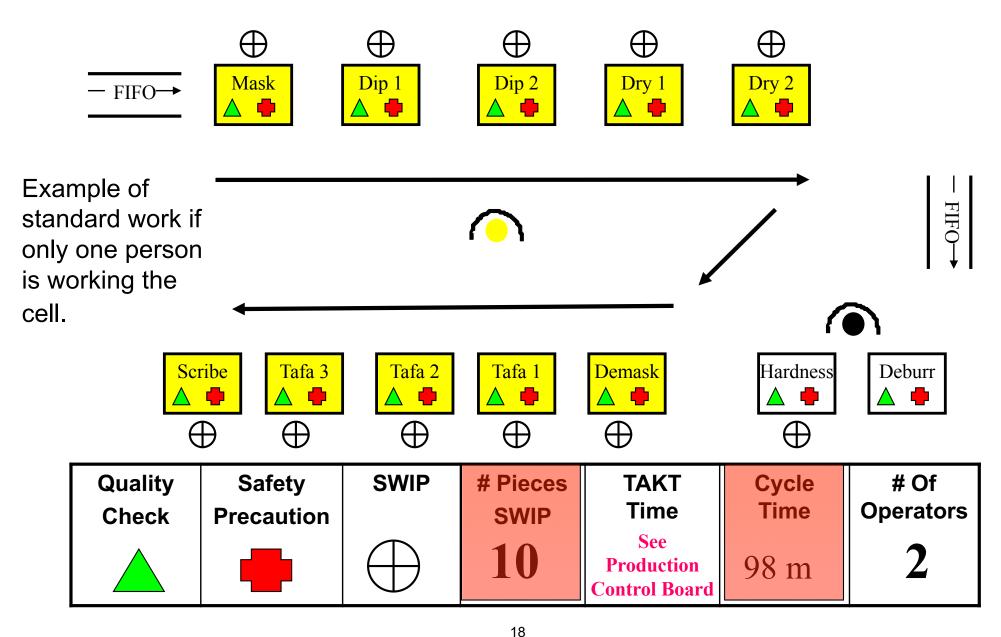

Show Process Flow posted at the entrance of the cell. Pictures below the layout show state of part before and after cell processes

Standardized Work

Standardized Work

Benefits of Standard Work Being Visual

<u>Group discussion</u> – What are the benefits of visual Method Sheets to communicate standard work?

Prepare examples of good visual Method Sheets.

Discuss places visual Method Sheets may be used but are not currently in use.

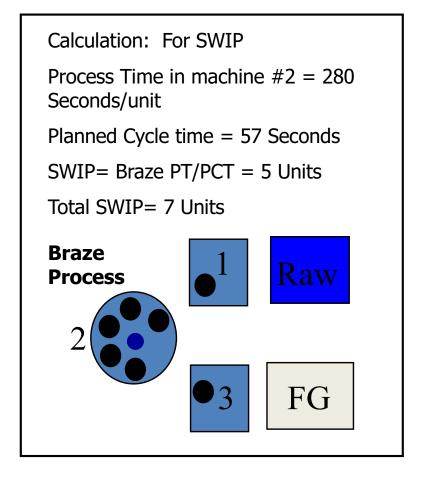

Standard Work In Process

SWIP is the minimum amount of product

necessary for the cell to produce product to obtain Takt.

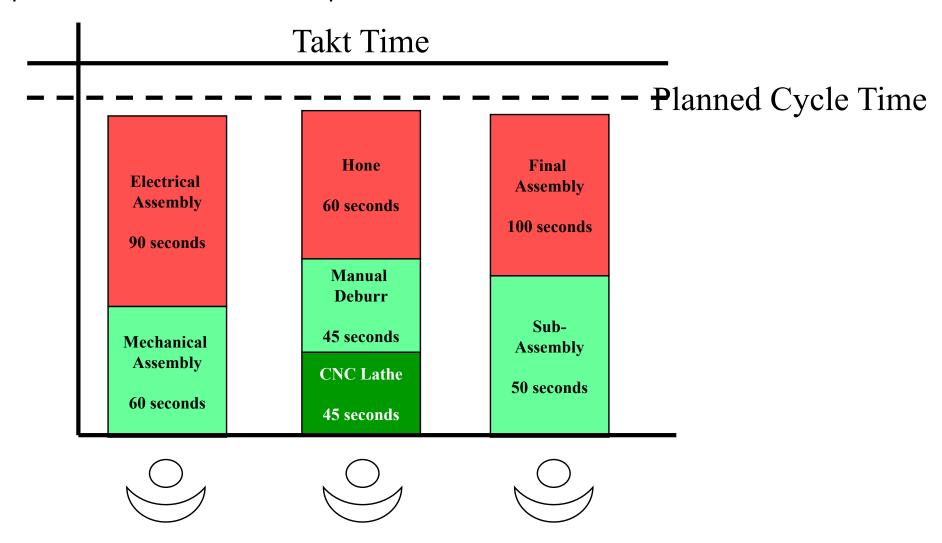

Example:

- -Machine #1 Lathe
- -Machine #2 Brazing machine
- -Machine #3 Lathe

Balanced Standard Work

Process cells balance work between operators to optimize performance and avoid overproduction

Standard Work for Management

Standard work at the management level provides all the information required to *manage* the operation of the value stream at both the individual process level and across the value stream.

Examples:

- Standard work for how the pacemaker is scheduled.
- Standard work for how kanban signals are scheduled at the fulfillment
- Standard work for how a FIFO operates.
- Standard work for Value Stream Walks.
- Standard work for Continuous Improvement Activities.

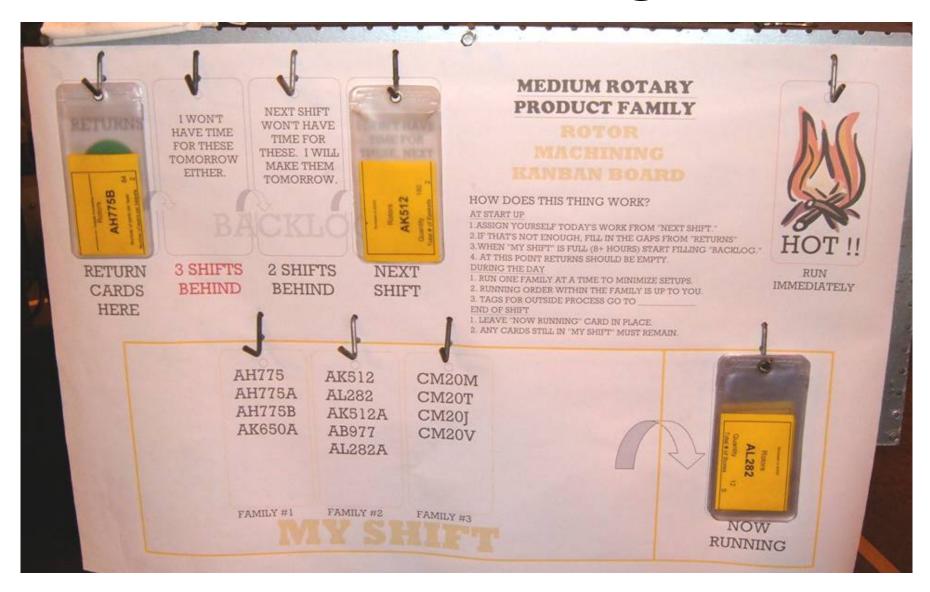

Standard Work for Management

Standard work for the schedule /pitch board.

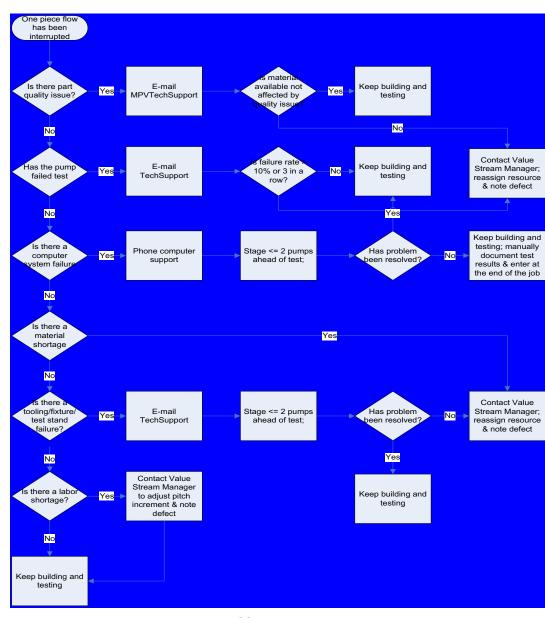

Standard Work for Management

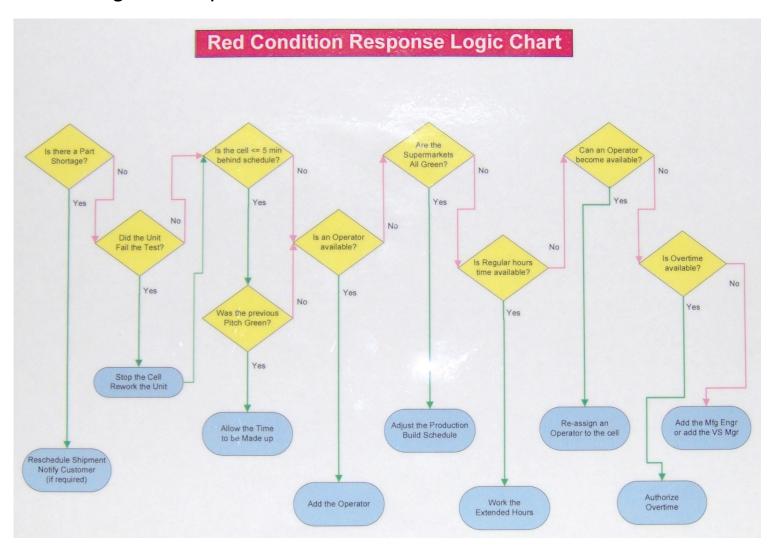

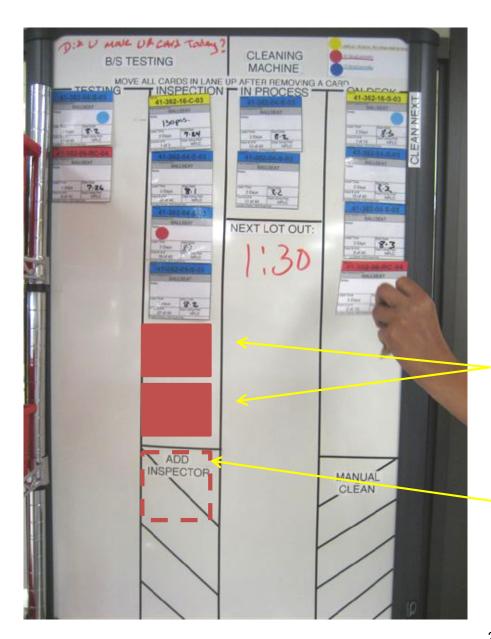

Standard work for the abnormal provides each and every employee the information to fix flow when it breaks down.

Standard Work for Abnormal Conditions

The Pitch Board logic chart provides a standard and automatic format for decision making

Test & Cleaning (Machine) FIFO

As kanban cards arrive they are paced in the appropriate FIFO

When the cards exceed the inspectors threshold everyone can see an additional inspector is required

This chart along with the color coded FIFO tells what the standard work should be for this area

4 to 5 wagons. * Support will determine best course of action	to move b	and into CRE	
* Investigate bottleneck in Process. * Readjust flow for customer demand and takt * Extend hrs. of support not to exceed one hr. approval. * Parts to be completed within 24 hours.			
* Cell / Working Leader will determine best courted YELLOW. * Investigate bottleneck in Process. * Readjust flow for customer demand and takt * Notify Management of overload position. * Extend hours of support, increase manpower.	time.		

Used to:

Visually display the best combination of operator and machine.

Provide adherence to Standardized Work in the cell.

Train operators.

Displays the sequence of steps for an operator.

Provides the sequence of operations and the standard time each step should take.

- Critical skill is learning to describe work in terms of both work content and key points.
- Work content and element descriptions tell how to do the job in simple and easy to understand steps
 - A fixed amount of work, a complete task.
 - It should have a defined start and stop
 - Something you can teach
 - Should always be performed the same way
 - Usually take the form of a Verb / Object
 - Attach 55 Muffler
 - Pack into Size 8 box using inserts
 - Install XY Bracket

- Key points describe factors such as special motions, special information, safe technique, etc. as additional information required to do job to quality, safety, productivity, and cost expectations.
- Tells how by conveying important information on safety, quality, technique, and cost
 - How to use wrench properly for technique and safety
 - How parts fit together (top aligns with blue line on body)
 - How far to hold paint gun from item
 - How to attach labels so they "stick"

Does Standard Work Require Change?

Change Model

Change Requires Leadership

Clear direction

Focused goals and rationale thinking

Willingness to let people make mistakes

Express their feelings openly

Make honest mistakes without blame or reprisals

Get credit for their ideas, work and successes

Drive the process and methodology for creating standard work, not the solutions.

Next Steps...

Create and post the standardized work documents so that it is <u>VISIBLE</u> to the operators and managers

Standardized Work needs to be revisited and updated regularly.

Manager owned

Benchmark for improvements

Audit adherence – make part of management standard work to have Value Stream management audit randomly selected standard work daily.

Use the Operator Loading Chart to identify future Continuous Improvement activities in the cell.

Last Point

If you don't create standard work for your people... they will, and each will create their own standard work!
